

RoadHawk Ride R+ Cycle Edition

RoadHawk Ride R+ Cycle Edition

Designed to be used by cyclists, yet just as suitable for horse riders and sports action use, the RoadHawk Ride R+ Cycle Edition is a market leading bullet camera. The waterproof, discrete and robust camera offers a choice of standard or loop recording with an optional time and date stamp. This makes it ideal for road users recording their journeys for evidential purposes or for recording sports action adventures.

RF Remote Control

The additional RF remote control allows for greater flexibility when using the RoadHawk Ride R+ Cycle Edition, not only allowing remote recording, but also the ability to take photographs.

Memory Capacity

The Ride R+ Cycle Edition is supplied with an 8GB MicroSD Memory card that can hold around 90 minutes of 1080p HD video. When upgraded to a 32GB card, the recording capacity is extended to over 5 hours (subject to power supply).

Easy to Operate

We've made the RoadHawk Ride R+ Cycle Edition as simple as possible to operate. There is a single button on the camera to turn it on/off. If the camera is on then it is recording! Vibration alert also so enables you to know it is powered on or off, without looking at the camera.

Battery Capacity

The built-in Li-Poly battery will record for around 90 minutes. The optional RoadHawk USB battery pack can be connected for longer record times (up to 4.5 hours), whilst the complete kit remains waterproof.

UK Designed Software

The RoadHawk Ride R+ Cycle Edition is also fully software configurable, allowing riders to adjust the settings for exposure, brightness and contrast.

The software also allows loop record mode to be turned off for the rides you don't want recorded over, the time and date stamp added removed or changed, and footage inverted for times when mounting the camera the right way up are not possible. If you want to power the RoadHawk Ride R+ Cycle Edition for longer, there is an optional hardwiring kit available. If you want to use the RoadHawk Ride R+ Cycle Edition camera on a motorbike, then we have the RoadHawk Bullet R+ Moto with the additional hardwiring included.

Features

- Loop recording (selectable)
- Date/time stamp (selectable)
- 1080P (30fps) 720p (60fps) resolution
- Waterproof up to 10 metres
- 5MP photo mode
- 135° wide angled lens
- Vibration alert
- One button operation
- 90 minute battery life
